

The proposed display, expert mode

Long 50-strike straddle bought at 25% vol: P&L if unwound (black) at each quarter of its life, by prevailing implied-vol regime σ_I .
 Bands: where the share is likely to be given that regime, with realised vol $\sigma_R = \sigma_I$ (lognormal; $\rho = -0.60$, $v = 0.85$ from Apple, 2021 to 2026).

Profit / loss per share if unwound (currency units); one contract = 100 shares

Share price at the unwind date

— Unwind P&L at σ_I (mid-market)

68% band of spot, given the regime

95% band

— Conditional median of spot
